

Omega Proteins / Leo Group is one of the UK's leading collectors of animal by products. We specialise in the processing of these by products into meals, oils and pet food ingredients, which we export around the world.

A family run company started in the late 1970's, Leo Group now employs a workforce of more than 1000 employees.

Managing operations globally, we have a portfolio of numerous sites which includes operational sites in the UK, Belgium and South Africa.

Every year we collect and process in excess of 1.25 million tonnes of waste material. From this processing operation we produce 130,000 tonnes of protein meal and 70 million litres of purified fats per year. Our meal and fats are used across a range of industries, including the biofuels, cosmetics, pet food, oleo chemical, agricultural and power industry.

We are also at the heart of renewable energy and waste management. With several investments in solar, wind and biomass, along with interest in Refuse-Derived Fuel (RDF) for power generation.

We aim to play a major role in the communities in which we operate through jobs and investment. In addition we support charities and good causes in our local community.
